

## Adding a Page Break

### Insert Page Breaks

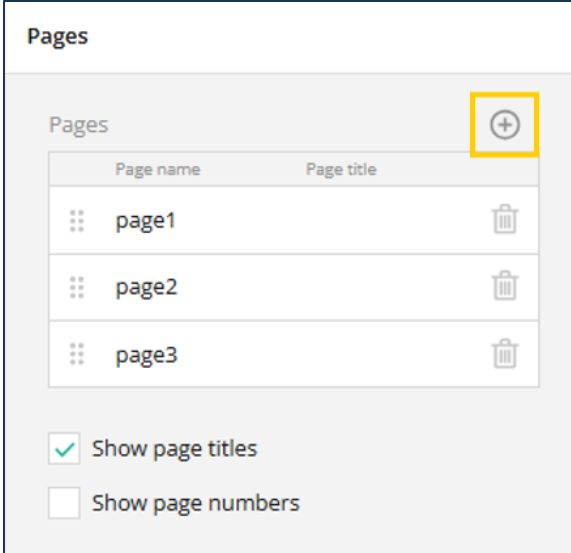

Inserting a page break requires participants to click a “Continue” button to proceed to the next page. Page breaks are useful to divide a longer survey into more digestible, bite-sized sections.

In PsychData, implied Page Breaks are already visible within the design tab. They can be added by simply adding questions to the next page.

The screenshot shows a survey design interface with two pages. The top section is titled "Survey Title" and has a "Description" field. Below this is "Page 1" with a "Description" field and a question labeled "1. question1" in a text input box. At the bottom of Page 1 is an "Add Question" button with a three-dot menu. Below Page 1 is "Page 2" with a "Description" field and another "Add Question" button with a three-dot menu.

Add a page by inserting a page from the General Survey Settings, under Pages.

The screenshot shows the "Pages" settings panel. At the top is a "Pages" section with a plus sign icon in a yellow box. Below this is a table with two columns: "Page name" and "Page title". The table lists three pages: "page1", "page2", and "page3", each with a trash icon to its right. Below the table are two checkboxes: "Show page titles" (checked) and "Show page numbers" (unchecked).

| Page name | Page title |
|-----------|------------|
| page1     |            |
| page2     |            |
| page3     |            |
